Connect Modbus RTU Servers to BACnet MS/TP Devices

The 460MMBM moves data between a network of up to 32 Modbus RTU Servers and up to 32 BACnet MS/TP devices.
With the 460MMBM, you're mapping Modbus coil and register data directly to BACnet MS/TP as binary and analog values.

How Do I Use the 460MMBM-N34 in My Application?

Modbus register data is mapped to BACnet analog objects and Modbus coil data is mapped to Binary objects. The only additional piece required for BACnet is adding metadata which is nothing more than an ASCII description of each object.
It really is that simple.

Why Use Real Time Automation as a Gateway Supplier?

While there are certainly other companies offering protocol gateways, there is no one who provides the level of support and service that you receive from RTA.

When you call, a live person answers the phone. When you talk with sales, you will get honest answers and recommendations. When you get support, it is from an engineer who had a hand in the product's development, and support doesn't require a ticket or 24-hour wait.
